

## The V-Series Module

The Universal Friction Module, sometimes referred to as the Universal Duopod, has been redesigned without J-Valves and for use with both the V-Series Friction Modules shown in the photo above with the green friction pads and the original round style. We are pleased to announce that both the Standard Series brakes and the HP-Series brakes are available using either option. The new V-modules feature Montalvo's patented no-tools replacement of the friction linings, greatly reducing the time and effort required for pad changes. These new modules are also offered as a replacement parts to customers wishing to upgrade to the convenience and utility of the new design. The new V-Series modules are available with any of the standard friction materials that are available on the Standard Duopod module.

There is no difference in price between the two modules – the savings come from reduced down time for maintenance.

Replacement components for both the V-Series Module and the Universal Module and are held in stock at our Toronto facility for immediate delivery.
